SANE-P® Test Content Outline

Identify urgent/emergent medical problems (e.g., strangulation, head injury, wounds, drug/alcohol intoxication) that require medical treatment prior to and/or during the medical forensic examination. Assess safety needs of the patient (e.g., bed rails, medical equipment, environment, patient identify) and implement safety measures during the SANE evaluation. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, psychological, cognitive) to sexual assault/abuse (e.g., psychological, psychological psychological, psych	Democia 1. Assessment and Decompositation		
Identify urgent/emergent medical problems (e.g., strangulation, head injury, wounds, drug/alcohol intoxication) that require medical treatment prior to and/or during the medical forensic examination. Assess safety needs of the patient (e.g., bed rails, medical equipment, environment, patientidentity) and implement safety measures during the SANE evaluation. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Obtain and document the health history (e.g., medical, psychosocial, developmental, behavioral). Obtain and document the sexual assault/abuse history. Ostain and document the sexual assault/abuse history. Ostain and document the sexual assault/abuse history. Ostain and document for indicators of alcohol- and/or drug-facilitated sexual assault/abuse. Assess the patient's ire sevel of development (e.g., physical, psychological, cognitive, sexual maturation). Ostain and document for sexually transmitted infections and/or exposure risk. Ostain and sexual assault/abuse history. Ostain and document for sexually transmitted infections and/or exposure risk. Ostain and transmitter of sexually transmitted infections and/or exposure risk. Ostain and sexual assault/abuse for trauma by using appropriate methods or adjuncts (e.g., sexual assault/abuse for trauma by using appropriate methods or adjuncts (e.g., sexual assault/abuse for trauma by using appropriate methods or adjuncts (e.g., normal variances, mirries of abuse). Ostain and for mormal and abnormal physical findings (e.g., normal variances, mirries of abuse). Ostain and for exposure forensic sample integrity (e.g., knowledge of biological degradation, chain of custody) Ostain and formal propriate communication resources (e.g., in	Domain 1: Assessment and Documentation		
drug/alcohol intoxication) that require medical treatment prior to and/or during the medical forensic examination. Assess safety needs of the patient (e.g., bed rails, medical equipment, environment, patien identity) and implement safety measures during the SANE evaluation. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Obtain and document the health history (e.g., medical, psychosocial, developmental, behavioral). Obtain and document the sexual assault/abuse history. Obtain and document the sexual assault/abuse history. Assess the patient for indicators of alcohol- and/or drug-facilitated sexual assault/abuse. Assess the patient's level of development (e.g., physical, psychological, cognitive, sexual maturation). Assess the patient for sexually transmitted infections and/or exposure risk. Conduct a comprehensive head-to-toe physical assessment and document findings (e.g., narrative, diagrammatic). Assess offices involved in the sexual assault/abuse for trauma by using appropriate methods or adjuncts (e.g., speculum, anoscope, magnification, toluidine blue dye, catheter technique, positioning). Distinguish trauma from normal and abnormal physical findings (e.g., normal variances, mimics of abuse). Complete photographic documentation by using principles of forensic photography. Domain 2: Evidence Collection 14% Identify items for evidence collection based on the circumstances or events (e.g., time frame, orifices involved, body contact). Collect biological and trace specimens from involved orifices and other body areas of contact by using appropriate methods or adjuncts (e.g., alternate light sources, toxicology kits, sexual assault evidence kits). Collect reference samples (e.g., blood, buccal swab) for the patient's DNA. Preserve forensic sample integrity (e.g., knowledge of biological degradation, chain of custody) Domain 3: Patient Management Obtain the SANE and the p	34%	I dontify was out /our average up a disal predictors (our atweet a valeties a leased in item, we want	
forensic examination. Assess safety needs of the patient (e.g., bed rails, medical equipment, environment, patien identity) and implement safety measures during the SANE evaluation. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Obtain and document the health history (e.g., medical, psychosocial, developmental, behavioral). Obtain and document the sexual assault/abuse history. O106 Assess the patient for indicators of alcohol- and/or drug-facilitated sexual assault/abuse. O107 Assess the patient's level of development (e.g., physical, psychological, cognitive, sexual maturation). O118 Assess the patient for sexually transmitted infections and/or exposure risk. O119 Assess the patient for pregnancy and/or pregnancy risk. O110 Assess the patient for pregnancy and/or pregnancy risk. O111 Conduct a comprehensive head-to-toe physical assessment and document findings (e.g., narrative, diagrammatic). Assess orifices involved in the sexual assault/abuse for trauma by using appropriate methods or adjuncts (e.g., speculum, anoscope, magnification, toluidine blue dye, catheter technique, positioning). O112 Distinguish trauma from normal and abnormal physical findings (e.g., normal variances, mimics of abuse). O114 Complete photographic documentation by using principles of forensic photography. D0main 2: Evidence Collection O201 Identify items for evidence collection based on the circumstances or events (e.g., time frame, orifices involved, body contact). Collect biological and trace specimens from involved orifices and other body areas of contact by using appropriate methods or adjuncts (e.g., alternate light sources, toxicology kits, sexual assault evidence kits). O202 Collect reference samples (e.g., blood, buccal swab) for the patient's DNA. Preserve forensic sample integrity (e.g., knowledge of biological degradation, chain of custody) D0main 3: Patient Management O302 Provide	0101		
Assess safety needs of the patient (e.g., bed rails, medical equipment, environment, patien identity) and implement safety measures during the SANE evaluation. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Obtain and document the health history (e.g., medical, psychosocial, developmental, behavioral). Obtain and document the sexual assault/abuse history. Obtain and document the sexual assault/abuse history. Obtain and document the sexual assault/abuse history. Assess the patient for indicators of alcohol- and/or drug-facilitated sexual assault/abuse. Assess the patient for indicators of alcohol- and/or drug-facilitated sexual assault/abuse. Assess the patient for sexually transmitted infections and/or exposure risk. Assess the patient for pregnancy and/or pregnancy risk. Olog Assess the patient for pregnancy and/or pregnancy risk. Conduct a comprehensive head-to-toe physical assessment and document findings (e.g., narrative, diagrammatic). Assess orifices involved in the sexual assault/abuse for trauma by using appropriate methods or adjuncts (e.g., speculum, anoscope, magnification, toluidine blue dye, catheter technique, positioning). Distinguish trauma from normal and abnormal physical findings (e.g., normal variances, mimics of abuse). Omamin 2: Evidence Collection 14% Ocomplete photographic documentation by using principles of forensic photography. Domain 2: Evidence Collection Light items for evidence collection based on the circumstances or events (e.g., time frame, orifices involved, body contact). Collect biological and trace specimens from involved orifices and other body areas of contact by using appropriate methods or adjuncts (e.g., alternate light sources, toxicology kits, sexual assault evidence kits). Collect reference samples (e.g., blood, buccal swab) for the patient's DNA. Preserve forensic sample integrity (e.g., knowledge of biological degradation,			
identity) and implement safety measures during the SANE evaluation. Identify the acute and long-term emotional and psychological response (e.g., neurobiological, suicidal ideation, post-traumatic stress disorder) to sexual assault/abuse. Obtain and document the health history (e.g., medical, psychosocial, developmental, behavioral). Obtain and document the sexual assault/abuse history. Olos Assess the patient for indicators of alcohol- and/or drug-facilitated sexual assault/abuse. Assess the patient for indicators of alcohol- and/or drug-facilitated sexual assault/abuse. Assess the patient for sexually transmitted infections and/or exposure risk. Assess the patient for pregnancy and/or pregnancy risk. Olog Assess the patient for pregnancy and/or pregnancy risk. Conduct a comprehensive head-to-toe physical assessment and document findings (e.g., narrative, diagrammatic). Assess orifices involved in the sexual assault/abuse for trauma by using appropriate methods or adjuncts (e.g., speculum, anoscope, magnification, toluidine blue dye, catheter technique, positioning). Distinguish trauma from normal and abnormal physical findings (e.g., normal variances, mimics of abuse). Omania 2: Evidence Collection 14% Complete photographic documentation by using principles of forensic photography. Domain 2: Evidence Collection 14% Collect biological and trace specimens from involved orifices and other body areas of contact by using appropriate methods or adjuncts (e.g., alternate light sources, toxicology kits, sexual assault evidence kits). Collect reference samples (e.g., blood, buccal swab) for the patient's DNA. Preserve forensic sample integrity (e.g., knowledge of biological degradation, chain of custody) Document clothing and biological and trace specimens collected. Domain 3: Patient Management Utilize appropriate communication resources (e.g., interpreters, technology, translation services) based on patient and/or caregiver needs.

, ,	0301	services) based on patient and/or caregiver needs.	
0303 Provide the patient with developmentally appropriate control and consent	0302	Provide crisis intervention to the patient and family members/caregivers.	
2000 1.10 vide the patient with developmentally appropriate control and consent.	0303	Provide the patient with developmentally appropriate control and consent.	

0304	Conduct the medical forensic examination by using trauma-informed care principles.
0305	Modify and document examination techniques (e.g., positioning) based on the patient's
	specific needs (e.g., variations in anatomy, physical/cognitive impairments).
0306	Educate the patient and/or caregiver about transmission of sexually transmitted infections.
0307	Educate the patient and/or caregiver about testing, prophylaxis, and treatment for sexually
	transmitted infections.
0308	Administer testing, prophylaxis, and treatment for sexually transmitted infections as indicated.
0309	Educate the patient and/or caregiver on pregnancy risks and emergency contraception.
0310	Administer pregnancy testing and emergency contraception as indicated.
0311	Educate the patient and/or caregiver about actions and side effects of prophylactic medications.
0312	Consult with or refer to other healthcare providers regarding medical problems identified.
0313	Refer the patient and/or caregiver for follow-up counseling, support, and/or advocacy services.
0314	Create discharge and safety plans (i.e., intimate partner violence).
0315	Conduct follow-up based on medical forensic needs (e.g., wound healing, photography,
D	lab results).
10%	in 4: Legal Issues and the Judicial Process
0401	Adhere to applicable mandatory reporting requirements as appropriate.
	Respond to subpoenas and court orders for judicial proceedings (e.g., civil, criminal,
0402	administrative).
0403	Testify as a fact or expert witness for the prosecution or defense.
0404	Provide ethical and professional testimony (e.g., objective, evidence-based, accurate).
Doma 12%	in 5: Professional Practice
0501	Implement safety measures (e.g., physical, environmental, equipment) for the safety of the SANE during and after the medical forensic examination.
0502	Implement principles of confidentiality (e.g., privacy laws, release of information).
0503	Implement principles of informed consent/assent and informed refusal.
0504	Evaluate and utilize current evidence-based practice (e.g., research, professional development, guidelines).
0505	Participate in peer review, case review, and quality improvement processes.
0506	Implement strategies to collaborate with interprofessional team members.
0507	Identify risks, prevention, and interventions for vicarious trauma.
0508	Incorporate ethical principles into professional practice (i.e., autonomy, beneficence,
	nonmalfeasance, justice).
